Gonzalo Argañaraz

arggondev@gmail.com

Backend Developer specializing in .NET Core, focused on designing and operating scalable, reliable systems. Strong emphasis on understanding business logic to drive clean architecture decisions and efficient problem-solving. Experienced in improving system performance and maintainability through thoughtful code design and database optimization. Documentation-driven approach: I produce clear, concise technical documentation to accelerate onboarding and support long-term system evolution.
Continuously learning through hands-on projects and technical communities, with a focus on applying modern tools and practices pragmatically. Known for ownership, attention to quality, and actively contributing to team improvement through constructive feedback and collaboration.

Work Experience

Senior AI Software Engineer **GlobalLogic** **May 2026 – Aug 2026**
Coalfire

- Implemented a Spec Driven Development (SDD) framework to allow the team to deliver software in a more efficient way using AI.
- Improve the SDD to include Test Driven Development approach.
- Refactor of Agents SKILLs to be more focused on requirement gathering and clear scopes of desired features.

Senior Software Engineer **GlobalLogic** **Jul 2025 – Dec 2025**
Coalfire

- Designed and implemented a new access role with associated permissions and restrictions, enabling monetization via AWS Marketplace default offerings.
- Migrated critical endpoints from a legacy monolithic API to a .NET 9 microservice, improving system scalability and reducing response times by 30% under high load.
- Refactored Angular components to align with v19 standards, reducing frontend load times by 22% and improving maintainability.

Software Engineer II **GlobalLogic** **Apr 2022 - May 2025**
Lytx

- Designed and implemented a high-performance bulk data endpoint, reducing client processing time by 80% and enabling more efficient data retrieval at scale.
- Enhanced product usability by introducing advanced filtering capabilities, allowing users to quickly locate relevant data and improving overall workflow efficiency.
- Resolved cross-layer issues across frontend, backend, and database, improving system stability and overall user experience.

Software Developer **e.tres** **2021 - 2022**

- Resolved platform integration issues with payment gateways by redesigning core transaction logic, improving reliability and reducing integration failures.
- Improved product discoverability and UI clarity by redesigning product cards (pricing, descriptions, visual hierarchy), enhancing user engagement.
- Refactored critical parts of the codebase by aligning implementation with business requirements, improving readability, maintainability, and system performance.

Consultant GreenDot **Feb 2026**

- Implementation of CQRS + Mediator patterns for payment microservice

Technologies and Languages

- Languages: C#, TypeScript, SQL, JavaScript
- Backend & Frameworks: NET Core, ASP.NET Core, REST APIs, Microservices Architecture, Entity Framework
- Frontend: Angular (v19), HTML, CSS, Angular Material, PrimeNG
- Databases: MSSQL
- Cloud & DevOps: AWS (API Gateway, Lambda, S3), CI/CD, Git, Docker (basic)
- Architecture & Practices: Clean Architecture, SOLID, Design Patterns
- Caching: Redis
- Messaging: RabbitMQ, Kafka
- Testing: xUnit, NUnit, Jasmine, Vitest, Playwright
- Monitoring: Datadog, New Relic.
- Auth: JWT, OAuth, IdentityServer.
- Other: Data Structures & Algorithms, Performance Optimization, API Design, Technical Documentation, Debugging & Troubleshooting

Education and Certifications

- **Técnico Programador Universitario,** UTN(FRT), Argentina. **2021**

Certifications

- **EFSET English Certificate 61/100 (C1/Advanced)**
- Getting Started with .NET Core Clean Architecture
- Enterprise Application Architecture with .NET Core

Interests

- Video games (strategy and problem-solving).
- Read technical articles and industry trends.
- Watch series.
